RankRelay agency plan

An 8-agent SEO and AEO agency built on the ai-employees kits

Agency type

RankRelay is an SEO and AEO agency. It improves how a site performs in search and how likely AI answer engines are to cite it. Its demo client is Shoestring Atlas, a fictional budget travel blog on GitHub Pages with 10 planted defects, so the audit has known answers to check against.

The team and mapped tasks

Employee	Kit	Daily task
Project Manager	chief-of-staff	Audits all 7 agents, updates the Google Sheet ledger, writes the daily brief for the email bulletin
Lead Researcher	seo-employee	Maps 10 traveller questions to site pages, ranks the gaps and picks the next article
Content Writer	social-media-employee	Drafts an answer-first article with a title tag, description and FAQPage schema
Performance Analyst	gtm-engineer	Reports the crawl scoreboard, SEO and AEO scores and the top 3 bottlenecks
Campaign Builder	ad-manager-employee	Builds a 7-day promotion schedule with draft headlines and posts; paid items wait for approval
Technical Auditor	web-dev-employee	Audits the live crawl for defects, gives the exact fix for each and proposes an llms.txt
Support Triage	customer-satisfaction-employee	Sorts the sample reader inbox, drafts priority replies and flags spam and site defects
Outbound Strategist	sales-employee	Lists 8 link and citation targets from web search and drafts outreach, unsent

How a day runs

At 7:15 AM a crawler reads the live site. Four agents analyse it in parallel, the writer drafts, then the campaign and outbound agents build on the draft. Code checks every output before the Project Manager reviews the work.

Latest result

8 of 8 agents finished in 3m 26s. The crawl checked 9 URLs and scored the site SEO 85 and AEO 41 out of 100.

Reporting

Each run adds a row per agent to the ledger: Timestamp, Agent Name, Task Performed, Output Status. An Apps Script trigger emails the bulletin at 8:00 AM, and warns if no agent ran in the last 24 hours.

Guardrails

Agents have no tool for sending or posting, and work orders keep them in their run folder. Replies, outreach and ads stay as drafts.
